

SPECIFICATION

Fabrication method for a computer-generated hologram or a
holographic stereogram in which a three-dimensional object
5 having visualized cross-sectional surfaces is recorded, and a
computer-generated hologram/holographic stereogram in which
a three-dimensional object having visualized
cross-sectional surfaces is recorded

10

TECHNICAL FIELD

The present invention relates to a fabrication method
for a computer-generated hologram (CGH) or a holographic
stereogram in which a three-dimensional object having
visualized cross-sectional surfaces is recorded, and a
15 computer-generated hologram and a holographic stereogram in
which a three-dimensional object having visualized
cross-sectional surfaces is recorded. More particularly, the
present invention relates to a method for recording a
three-dimensional object composed of three-dimensional
20 measured data as a computer-generated hologram or a
holographic stereogram, wherein the computer-generated
hologram or the holographic stereogram is processed to enable
a given cross section of the three-dimensional object to be
observed, and relates to a computer-generated hologram and
25 a holographic stereogram thus fabricated.
